To what extent were your students productively engaged throughout the lesson? (4A)

Students were engaged throughout the lesson. They were asking questions, writing on the tables, filling out the assignments, and in general on task throughout the lesson.

Did the students learn what you intended? Were instructional outcomes/objectives met? How do you know? (4A)

Yes. The students understood the concept. They were able to apply it in class with the exit ticket. Additionally, they demonstrated mastery in the Runestone and repl.it assignments, which allow them to apply the concept in different ways. Some students revised their games from last class to fit the else/if structure.

Reviewing the assignments in Runestone and Repl.it. This was a topic that students generally understood. The repl.its were completed and the runestone questions were generally correct on the first try.

If you had the opportunity to teach this lesson again to this same group of students, what would you do differently? Why? (4A)

I think the "Quick Check/Exit Ticket" was not quite as quick as I would've liked. I think it was hard for students to find multiple errors at a time because the errors compound on one another. This also gave them less time than expected to work on their other work. This is tough for some students because they need the guidance from me on some of their assignments. I have revised the quick check/exit ticket for next year.
